

# Software Hardware List

Chapter number	Software required (With version)	Free/Proprietary	Download links to the software	Hardware specifications	Browser Support
1-7	Chart.js JavaScript library and plugins	Free	<a href="https://chartjs.org/">https://chartjs.org/</a> or via CDN	NA*	Chrome, Edge, Firefox and Safari. Must support ES6.**

\* No hardware requirements are specified in the official sites. Web applications should be efficient and optimized for its audience, reducing memory and processing requirements as much as possible. Visualizations with many transitions and animations may require additional memory and processing capabilities, since they may run slowly in some systems, but the recommended practice is to optimize the system and not require extra resources from the user.

\*\* Although Chart.js supports older versions, all code, including code used in Chart.js examples, uses standard ES6 and works in any modern browser (Windows: does not work in any version of Internet Explorer; works in any Edge version).
